

City of Boynton Beach Agenda Item Request Form

Meeting Date: 05/19/2026

Proposed Resolution No. R26-082- Ratify the City's application for the FY 2025-2026 Florida Department of Law Enforcement (FDLE) Local Law Enforcement Immigration Grant Program in the amount of \$1,364,170.00, and authorizing the Mayor to accept the grant, if awarded, and execute all future documents associated with the grant, subject to review by the City Attorney's office.

Requested Action: Staff recommends approval of Proposed Resolution No. R26-082.

Explanation of Request:

The Boynton Beach Police Department (BBPD) is requesting authorization to ratify the submission of an application to the Florida Department of Law Enforcement (FDLE) Local Law Enforcement Immigration Grant Program. If awarded, the grant funding will be used to procure the Peregrine operational intelligence platform and Axon automated transcription services for body-worn camera (BWC) and in-car video systems.

The Peregrine platform is a CJIS-compliant, cloud-based software solution that integrates existing law enforcement systems, including CAD, RMS, license plate reader data, and Axon digital evidence platforms, into a unified and searchable environment. This system will enhance BBPD's ability to analyze data, identify patterns, and support coordinated law enforcement operations through improved information accessibility and situational awareness.

In addition, Axon transcription services will convert audio from BWC and in-car video recordings into searchable text, allowing officers and analysts to more efficiently locate and review relevant statements and events within recorded encounters. This capability significantly improves the speed and effectiveness of evidence review and investigative processes.

How will this affect city programs or services?

This funding will enhance the Police Department's operational efficiency and investigative capabilities without requiring additional City funding or staffing. The implementation of Peregrine and Axon transcription services will improve access to critical information, reduce manual review of video evidence, and streamline investigative workflows.

These tools will support more efficient use of existing personnel by reducing time spent on data retrieval and evidence review, allowing officers and analysts to focus more directly on public safety and enforcement activities. The project will not reduce or eliminate any existing City services; rather, it will enhance current law enforcement operations through improved technology integration and data accessibility.

Account Line Item and Description: Funds will support the procurement of the Peregrine operational intelligence platform and the Axon automated transcription services for body-worn camera and in-car video systems. If awarded, grant account numbers will be created.

Fiscal Impact: No fiscal impact at this time. This item covers the cost of a five-year subscription for the proposed services, with no matching funds required from the City.
