SUGGESTED ACTION

"The Chanhassen City Council approves a contract with KonectaEV, LLC for furnishing and installing public safety communication equipment at the new city hall."

Motion Type	Simple Majority Vote of members present
Strategic Priority	Operational Excellence

SUMMARY

Installation of radio and cellular phone antenna in the new city hall to allow public safety (Fire Department and CCSO) communications to work in the underground garage.

BACKGROUND

The new city hall has an underground garage that won't work with over the air signals for the networks used by public safety staff. Antenna expanders (sometimes referred to as repeaters) are needed. There are only a few contractors that deal with these services. Staff reached out to four contractors that the Fire Department and Carver County advised to do the work. We received quotes from only two of them.

DISCUSSION

The contract is based on the city's standard template for Non-Bid Goods and Services (with Responsible Contractor provisions).

The low quote, KonectaEV, is a reputable company that has dozens of similar installations for other public agencies.

BUDGET

Two quotes were received for the scope of work:

Scope	KonectaEV	ANCOM
Public Safety Radio	$32,238.56	$56,063.24
Cellular Repeater	$59,236.64	$123,415.14
Total	$91,475.20	$179,478.38

The costs are included in the overall Civic Campus project budget.

RECOMMENDATION

Staff recommends approval of the contract with KonectaEV.
